REV272 01-Mar-2021

Operating Systems 211³⁾ — PJJ from HOME

ZOOM: A [Mon (or Wed) 10:00] — B [Mon (or Wed) 15:40] — C [Tue (or Thu) 08:00]

Week	Schedule & Deadline ¹⁾	Topic	OSC10 ²⁾
Week 00	22 Feb - 28 Feb 2021	Overview 1, Virtualization & Scripting	Ch. 1, 2, 18.
Week 01	01 Mar - 07 Mar 2021	Overview 2, Virtualization & Scripting	Ch. 1, 2, 18.
Week 02	08 Mar - 16 Mar 2021	Security, Protection, Privacy, & C-language.	Ch. 16, 17.
Week 03	17 Mar - 23 Mar 2021	File System & FUSE	Ch. 13, 14, 15.
Week 04	24 Mar - 30 Mar 2021	Addressing, Shared Lib, & Pointer	Ch. 9.
Week 05	31 Mar - 06 Apr 2021	Virtual Memory	Ch. 10.
Week 06	07 Apr - 25 Apr 2021	Concurrency: Processes & Threads	Ch. 3, 4.
Week 07	26 Apr - 02 May 2021	Synchronization & Deadlock	Ch. 6, 7, 8.
Week 08	03 May - 09 May 2021	Scheduling + W06/W07	Ch. 5.
Week 09	17 May - 23 May 2021	Storage, Firmware, Bootloader, & Systemd	Ch. 11.
Week 10	24 May - 06 Jun 2021	I/O & Programming	Ch. 12.

¹⁾ The **DEADLINE** of Week 00 is 28 Feb 2021, whereas the **DEADLINE** of Week 01 is 07 Mar 2021, and so on...

²⁾ Silberschatz et. al.: **Operating System Concepts**, 10th Edition, 2018.

³⁾ This information will be on **EVERY** page two (2) of this course material.

STARTING POINT — <https://os.vlsm.org/>

- ❑ **Text Book** — Any recent/decent OS book. Eg. (**OSC10**) Silberschatz et. al.: **Operating System Concepts**, 10th Edition, 2018. See also <https://www.os-book.com/OS10/>.
- ❑ **Resources**
 - ❑ **SCELE OS211** — <https://scele.cs.ui.ac.id/course/view.php?id=3134>.
The enrollment key is **XXX**.
 - ❑ **Download Slides and Demos from GitHub.com**
<https://github.com/UI-FASILKOM-OS/SistemOperasi/>:
os00.pdf (W00), os01.pdf (W01), os02.pdf (W02), os03.pdf (W03),
os04.pdf (W04), os05.pdf (W05), os06.pdf (W06), os07.pdf (W07),
os08.pdf (W08), os09.pdf (W09), os10.pdf (W10).
 - ❑ **Problems** — <https://rms46.vlsm.org/2/>:
195.pdf (W00), 196.pdf (W01), 197.pdf (W02), 198.pdf (W03),
199.pdf (W04), 200.pdf (W05), 201.pdf (W06), 202.pdf (W07),
203.pdf (W08), 204.pdf (W09), 205.pdf (W10).

 - ❑ **DOIT** — <https://doit.vlsm.org/001.html>

Agenda I

- 1 Start
- 2 Schedule
- 3 Agenda
- 4 Week 06
- 5 Week 06
- 6 Process Map
- 7 Process State
- 8 Makefile
- 9 00-show-pid
- 10 01-fork
- 11 02-fork
- 12 03-fork
- 13 01-fork vs 02-fork vs 03-fork
- 14 04-sleep
- 15 05-fork
- 16 06-fork

Agenda II

- 17 07-execvp
- 18 08-fork
- 19 09-fork
- 20 10-fork
- 21 11-fork
- 22 12-fork
- 23 13-uas161
- 24 14-uas162
- 25 15-uas171
- 26 16-uas172
- 27 Week 06: Check List
- 28 The End

Week 06 Concurrency: Topics¹

- States and state diagrams
- Structures (ready list, process control blocks, and so forth)
- Dispatching and context switching
- The role of interrupts
- Managing atomic access to OS objects
- Implementing synchronization primitives
- Multiprocessor issues (spin-locks, reentrancy)

¹Source: ACM IEEE CS Curricula 2013

Week 06 Concurrency: Learning Outcomes (1)¹

- Describe the need for concurrency within the framework of an operating system. [Familiarity]
- Demonstrate the potential run-time problems arising from the concurrent operation of many separate tasks. [Usage]
- Summarize the range of mechanisms that can be employed at the operating system level to realize concurrent systems and describe the benefits of each. [Familiarity]
- Explain the different states that a task may pass through and the data structures needed to support the management of many tasks. [Familiarity]

¹Source: ACM IEEE CS Curricula 2013

Week 06 Concurrency: Learning Outcomes (2)¹

- Summarize techniques for achieving synchronization in an operating system (e.g., describe how to implement a semaphore using OS primitives). [Familiarity]
- Describe reasons for using interrupts, dispatching, and context switching to support concurrency in an operating system. [Familiarity]
- Create state and transition diagrams for simple problem domains. [Usage]

¹Source: ACM IEEE CS Curricula 2013

Week 06: Concurrency: Processes & Threads

- Reference: (OSC10-ch03 OSC10-ch04 demo-w06)
- Process Concept
 - Program (passive) \leftrightarrow Process (active)
 - Process in Memory: | *Stack* \cdots *Heap* | *Data* | *Text* |
 - Process State: | *running* | *waiting* | *ready* |
 - Process Control Block (PCB)
 - /proc/, Process State, Program Counter, Registers, Management Information.
- Process Creation
 - PID: Process Identifier (uniq)
 - The Parent Process forms a tree of Children Processes
 - `fork()`, new process system call (clone)
 - `exec1p()`, replaces the clone with a new program.
- Process Termination
 - `wait()`, until the child process is terminated.
- PCB (Context) Switch

A PROCESS IN MEMORY

(c) 2017 VauLSMorg

Figure: A Process in (**logical**) Memory

Process State

Figure: A Process State

Process Scheduling

- Scheduling Queue
- Schedulers
 - Long Term (non VM) vs Short Term (CPU)
 - (I/O vs CPU) Bound Processes
- Context Switch
- I/O Queue Scheduling
- Android Systems
 - Dalvik VM Performance Problem: Replaced with ART (Android Runtime).
 - Foreground Processes: with an User Interface (UI) for Videos, Images, Sounds, Texts, etc.
 - Background Processes: with a service with no UI and small memory footprint.

Inter-Process Communication (IPC)

- Independent vs Cooperating Processes.
 - Cooperation: Information Sharing, Computational Speedup, Modularity, Convenience.
- Shared Memory vs Message Passing.
 - Message Passing: Direct vs Indirect Communication
- Client-Server Systems
 - Sockets
 - RPC: Remote Procedure Calls
 - Pipes

- Single vs Multithreaded Process
 - MultiT Benefits: Responsiveness, Resource Sharing, Economy, Scalability
- Multicore Programming
 - Concurrency vs. Parallelism
- Multithreading Models (Kernel vs User Thread)
 - Many to One
 - One to One
 - Many to Many
 - Multilevel Models
- Threading Issues
 - Parallelism on a multi-core system.
- Pthreads

Makefile

```
CC='gcc'
CFLAGS='-std=c99'

P00=00-show-pid
...
P15=15-uas171
P16=16-uas172

Week 06: Check List (Deadline: Monday, 16-Nov-2020).

- ☐ Week 06 Token: **JOLANTRU**
- ☐ Week 06: Assignment (more details in **os06.pdf**).
 - ➊ Read: (OSC10 chapter 03 + chapter 04)
 - ➋ Update your Virtual Guest.
 - ➌ Visit <https://os.vlsm.org/GitHubPages/>. Review **Last Week TOP 10 List** and pick at least 3 out of your 10 closest neighbors. See <https://cbkadal.github.io/os211/TXT/myrank.txt>.
 - ➍ Create your **TOP 10 List** of Week 06 (e.g. <https://cbkadal.github.io/os211/W06/>). **Do not use lecture material. Please be more creative!**
 - ➎ Run "chktoken JOLANTRU" and write the result into myW06token.txt.
 - ➏ Download <https://os.vlsm.org/WEEK/W06.tar.bz2.asc> and write the result into TXT/myW06.txt.
 - ➐ Update your log (e.g. <https://cbkadal.github.io/os211/TXT/mylog.txt>).
 - ➑ Update bash script (e.g. <https://cbkadal.github.io/os211/TXT/myscript.sh>).
 - ➒ Make SHA256SUM and sign it (detached, armor) as SHA256SUM.asc.
 - ➓ Do "make clean" your W06/ folder and "tar" it back into myW06.tar.bz2.
 - ➑ GnuPG encrypt (armor) to myW06.tar.bz2.txt.

The End

- ☐ This is the end of the presentation.
- ☒ This is the end of the presentation.
 - This is the end of the presentation.
