REV264 11-Feb-2021

# Operating Systems 211<sup>3)</sup> — PJJ from HOME

## ZOOM: A [Mon (or Wed) 10] — B [Mon (or Wed) 15] — C [Tue (or Thu) 08]

Week	Schedule & Deadline <sup>1)</sup>	Topic	OSC10 <sup>2)</sup>
Week 00	22 Feb - 28 Feb 2021	Overview 1, Virtualization & Scripting	Ch. 1, 2, 18.
Week 01	01 Mar - 07 Mar 2021	Overview 2, Virtualization & Scripting	Ch. 1, 2, 18.
Week 02	15 Mar - 21 Mar 2021	Security, Protection, Privacy, & C-language.	Ch. 16, 17.
Week 03	22 Mar - 28 Mar 2021	File System & FUSE	Ch. 13, 14, 15.
Week 04	29 Mar - 04 Apr 2021	Addressing, Shared Lib, & Pointer	Ch. 9.
Week 05	05 Apr - 11 Apr 2021	Virtual Memory	Ch. 10.
Week 06	26 Apr - 02 May 2021	Concurrency: Processes & Threads	Ch. 3, 4.
Week 07	03 May - 09 May 2021	Synchronization & Deadlock	Ch. 6, 7, 8.
Week 08	24 May - 30 May 2021	Scheduling + W06/W07	Ch. 5.
Week 09	24 May - 06 Jun 2021	Storage, Firmware, Bootloader, & Systemd	Ch. 11.
Week 10	07 Jun - 13 Jun 2021	I/O & Programming	Ch. 12.

<sup>1)</sup> The **DEADLINE** of Week 00 is 28 Feb 2021, whereas the **DEADLINE** of Week 01 is 07 Mar 2020, and so on...

<sup>2)</sup> Silberschatz et. al.: **Operating System Concepts**, 10<sup>th</sup> Edition, 2018.

<sup>3)</sup> This information will be on **EVERY** page two (2) of this course material.

# STARTING POINT — <https://os.vlsm.org/>

- **Text Book** — Any recent/decent OS book. Eg. (**OSC10**) Silberschatz et. al.: **Operating System Concepts**, 10<sup>th</sup> Edition, 2018. See also <http://codex.cs.yale.edu/avi/os-book/OS10/>.
- **Resources**
  - **SCELE** — <https://scele.cs.ui.ac.id/course/view.php?id=3020>. The enrollment key is **XXX**.
  - **Download Slides and Demos from GitHub.com**  
<https://github.com/UI-FASILKOM-OS/SistemOperasi/>:  
os00.pdf (W00), os01.pdf (W01), os02.pdf (W02), os03.pdf (W03),  
os04.pdf (W04), os05.pdf (W05), os06.pdf (W06), os07.pdf (W07),  
os08.pdf (W08), os09.pdf (W09), os10.pdf (W10).
  - **Problems** — <https://rms46.vlsm.org/2/>:  
195.pdf (W00), 196.pdf (W01), 197.pdf (W02), 198.pdf (W03),  
199.pdf (W04), 200.pdf (W05), 201.pdf (W06), 202.pdf (W07),  
203.pdf (W08), 204.pdf (W09), 205.pdf (W10).
- **Build your own Virtual Guest**  
<https://osp4diss.vlsm.org/>

# Agenda

- 1 Start
- 2 Schedule
- 3 Agenda
- 4 Week 09
- 5 Storage, Firmware, Bootloader, & Systemd
- 6 Storage Management
- 7 RAID
- 8 Legacy BIOS
- 9 UEFI
- 10 Operating System (Boot) Loader
- 11 GRUB Map
- 12 init (SYSV legacy)
- 13 UpStart - Ubuntu
- 14 The All New "systemd"
- 15 systemctl
- 16 Linux From Scratch (part 02)
- 17 Week 09: Check List

# Week 09 Storage, Firmware, Bootloader, & Systemd: Topics<sup>1</sup>

- Storage
- Storage Arrays
- BIOS
- Loader
- Systemd

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 09 Storage, Firmware, Bootloader, & Systemd: Learning Outcomes<sup>1</sup>

- Storage [Usage]
- Storage Arrays [Usage]
- BIOS [Usage]
- Loader [Usage]
- Systemd [Usage]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Storage, Firmware, Bootloader, & Systemd

- Reference: (OSC10-ch11)
- Storage Capacity (2019)<sup>1</sup>
  - Legacy 3.5" Floppy Disk (1.4MB) – obsolete?
    - SuperDisk (up to 240 MB) — never took off.
  - 4.7" Compact Disc (700MB) – obsolete?
    - 4.7" Digital Versatile Disc (up to 9GB) – ?
    - 4.7" Blu Ray (up to 128 GB) ⇒ DVD++.
  - Tape Cartridge (up to 15TB)
    - Robotic System (up to 250 PB per unit)
    - NASA, Google, Microsoft are still using this!
    - Cheap but slow.
  - Hard Disk Drives (up to 16 TB).
    - From Perpendicular Magnetic Recording to Shingled Magnetic Recording technology (+25% – writing problems).
    - Mechanical Disk Arm Scheduling (Until When?).
  - Solid-State Disks (up to 16 TB).
    - SSD Price > HDD Price.
    - Write Speed >> Read Speed.
    - (What is a) Flash Disk?

---

<sup>1</sup>Subject to change

# Storage Failure Rates

- MTDDL: Mean Time To Data Loss
- MTTF: Mean Time To Failure
- BackBlaze (Cloud Backup Services)

Drives Have 3 Distinct Failure Rates

Hard Drive Survival Rates - Chart 1

General Predicted Failure Rates

<https://www.extremetech.com/computing/170748-how-long-do-hard-drives-actually-live-for>

Figure: BackBlaze — Failure Rates of 25000 DISKS

# Storage Management

- Attached-Storage.
  - Host-Attached Storage: via I/O.
  - Network-Attached Storage (NAS): via distributed FileSystem.
  - Storage Area Network (SAN): dedicated Network.
- Formatting
  - Low Level (Physical)
  - High Level (FileSystem)
- Boot Block
- Disk Partition
  - "MBR"-scheme
    - upto 4 primary partition
    - upto 2 TB disk
  - "GPT"-scheme
    - "unlimited" partition
    - "unlimited" disk
    - redundancy
- Swap Space Management: On Partition or FileSystem?

# RAID: Redundant Array of In\* Disks

- RAID 0, 1, 5, 6, 10, 100
- Note (<http://www.commodore.ca/windows/raid5/raid5.htm>):
  - RAID was created to enhance data performance, reliability and availability.
  - Striping, parity checking and mirroring are three primary functions of RAID systems.
  - RAID performs its functions transparent to the operating system.
  - Systems are typically defined by ranks consisting of five disks each connected to one or two Disk Array Controllers.
  - Different RAID levels provide varying degrees of speed and data protection.
- Problems with RAID
- Stable-Storage Implementation

# BIOS, Boot, & Systemd

- Firmware
  - BIOS: Basic Input Output System.
  - UEFI: Unified Extensible Firmware Interface.
  - ACPI: Advanced Configuration and Power Interface.
- Operating System (Boot) Loader
  - BOOTMGT: Windows Bootmanager / Bootloader.
  - LILO: Linux Loader.
  - GRUB: GRand Unified Bootloader.
- Operating System Initialization
  - Init (legacy)
  - UpStart
  - Systemd

- Check Settings.
- Initialize CPU & RAM.
- POST: Power-On Self-Test.
- Initialize ports, LANS, etc.
- Load a Boot Loader.
- Handover to the Boot Loader.
- Provides "Native" (obsolete) Drivers only (not loadable).
- Provides "INT" services .
- Limitation.
  - Technology of 1970s.
  - 16 bits software.
  - 20 bits address space (1 MB).
  - 31 bits disk space (2 TB).

# BIOS

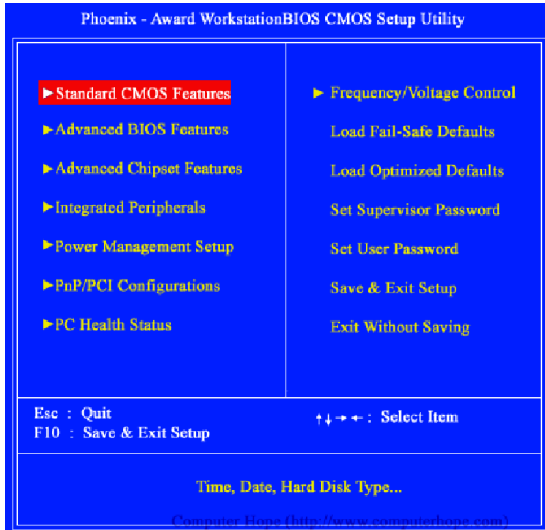

Figure: BIOS

- A Firmware Specification, not an Implementation!
- No (INT) service after boot.
- HII: Human Interface Infrastructure.
- Protected Mode.
- Flexible.
  - Technology of 2000s.
  - written in C.
  - (third party) loadable drivers and tools.
  - Emulate Legacy BIOS transition (MBR block, INT service).
  - UEFI Shell: environment shell for diagnostic (no need for DOS).
- Problems
  - Who controls the Hardware?
  - Is "Secure Boot" a good thing?
  - How about a **NASTY/LOCKING/TROJAN** UEFI implementation?
  - Different **DRIVERS**.

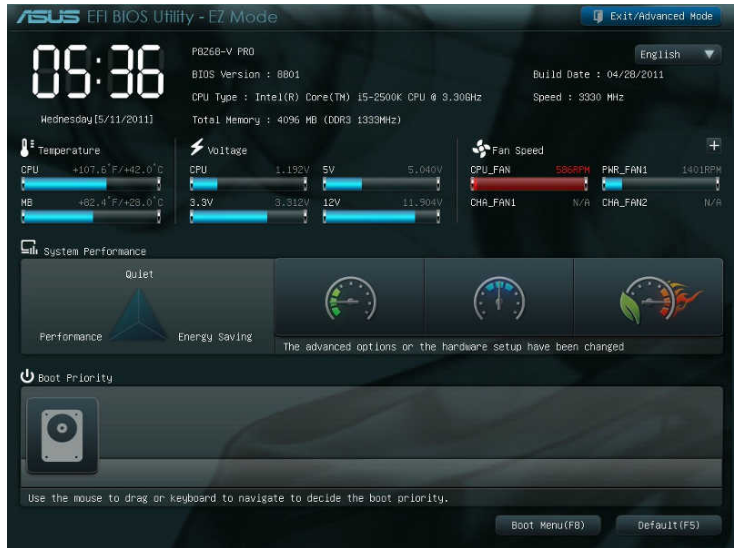

Figure: UEFI

## Platform Initialization (PI) Boot Phases

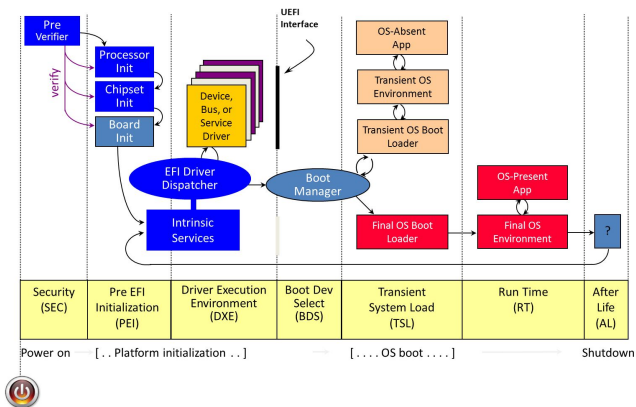

Figure: UEFI Boot Process<sup>1</sup>.

<sup>1</sup>Source Jarslstrom - 2014 - [www.tianocore.org](http://www.tianocore.org)

# Operating System (Boot) Loader

- General
  - How/Where to start the operating system?
  - What to do?
  - How many ways to boot?
  - How many types of OS?
- Disk Partition
  - MBR: Master Boot Record (1983).
  - GPT: GUID (Globally Unique Identifiers) Partition Table (2010s).
- GRUB: GRand Unified Boot system
  - Stage 1: a small boot.img inside the MBR.
  - Stage 1.5 (core.img): FileSystem drivers after MBR.
  - Stage 2: Kernel Selection: Windows, Linux, BSD, etc.
- GRUB2
  - More flexible than GRUB legacy.
  - More automated than GRUB legacy.
  - Accept MBR and GPT.
  - Stage 1.5 (core.img): generated from diskboot.img.
  - No 1024 cylinder restriction.

## GNU GRUB 2

Locations of *boot.img*, *core.img* and the */boot/grub* directory

Example 1: an MBR-partitioned harddisc with sector size of 512 or 4096Bytes

Example 2: a GPT-partitioned harddisc with sector size of 512 or 4096Bytes

Figure: GRUB<sup>1</sup>.

<sup>1</sup>Source Shmuel Csaba Otto Traian 2013

# init (SYSV legacy)

- File: `/etc/inittab`.
- Folders: `/etc/rcX.d` — `X` = runlevel.
  - Seven (7) different runlevels:
    - 0 (shutdown).
    - 1 (single-user/admin).
    - 2 (multi-user non net).
    - 3 (standard).
    - 4 (N/A).
    - 5 (3+GUI).
    - 6 (reboot).
  - `SXX-YYY`: Start
  - `KXX-YYY`: Kill.
- One script at a time in order.
- dependency is set manually.

- Developer: Ubuntu.
- Folder: `/etc/init/`.
- Control: `initctl`.
  - `initctl list` – listing all processes managed by upstart.
- better support for hotplug devices.
- cleaner service management.
- faster service management.
- asynchronous.

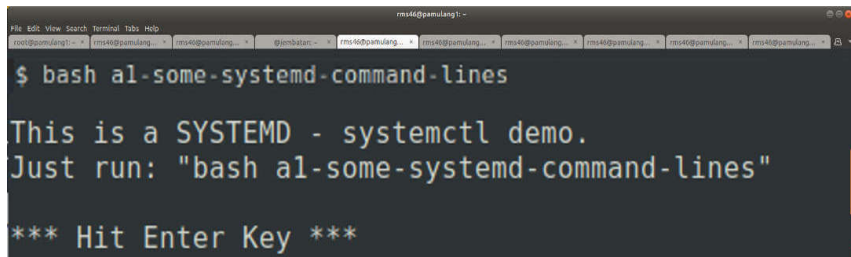

# The All New "systemd"

- Replaces (SYSV) init and UpStart.
  - better concurrency handling: Faster!
  - better dependencies handling: No more "S(tarts)" and "K(ills)".
  - better crash handling: automatic restart option.
  - better security: group protection from anyone including superusers.
  - simpler config files: reliable and clean scripts.
  - hotplug: dynamic start/stop.
  - supports legacy systems (init).
  - overhead reducing.
  - unified management way for all distros.
  - bloated: doing more with more resources.
  - linux specific: NOT portable.

# systemctl 01

# systemctl 04

A terminal window titled 'rms46@pamulang1: ~' showing the output of the command 'systemd-analyze blame'. The output lists various system services and their boot times. The command is repeated twice, and the output is separated by a separator line '===='. The first output shows the boot time for the system, and the second output shows the boot time for the services listed. The services listed are: keyboard-setup.service (2.374s), systemd-logind.service (963ms), rsyslog.service (957ms), ssh.service (954ms), rc-local.service (954ms), systemd-user-sessions.service (954ms), postfix.service (928ms), networking.service (589ms), snmpd.service (519ms), and systemd-tmpfiles-setup-dev.service (322ms). The terminal also shows a prompt '34' and a message '\*\*\* Hit Enter Key \*\*\*' at the bottom.

# Linux From Scratch (part 02)

- Week 09 (part 02).
  - Follow the "Linux From Scratch" book, chapter 01-06 (<http://www.linuxfromscratch.org/lfs/view/stable/>).
  - Screen capture with your **OWN** account (e.g. "cbkadal"):
    - ("W09-LFS-1.jpg"): LFS source-codes /mnt/lfs/sources/.
    - ("W09-LFS-2.jpg"): Disk size /dev/sda1/ and /dev/sdb1/.
  - Save (export) the result into "LFSC.ova".
  - Sign it as: "LFSC.ova.asc" (armor, detach).
  - Deliveries: tarball "TXT/myW09.tar.bz2.txt" (signed, asymmetric-key, armor) of folder W09/ (**4 files**).
    - ❶ Blank File: "YourAccount-YourStudentID.txt" (eg. "cbkadal-2006123456.txt").
    - ❷ File: "W09-LFS-1.jpg" (page 30).
    - ❸ File: "W09-LFS-2.jpg" (page 31).
    - ❹ File: "LFSC.ova.asc" (signature, armor, detach).
- Keep but **DO NOT SUBMIT** file LFSC.ova!.
- See also <https://lfs.vlsm.org/>.

# W09-LFS-2.jpg

A terminal window titled "rms46@pamulang1: ~/VirtualBox VMs" showing the output of the 'date' and 'df' commands. The 'date' command shows the current date and time as "Mon Nov 30 23:30:16 WIB 2020". The 'df' command shows the disk usage for /dev/sda1 and /dev/sdb1. The output for /dev/sda1 shows 16446332 1K-blocks used, 12871760 available, and 18% usage. The output for /dev/sdb1 shows 32894736 1K-blocks used, 30718376 available, and 2% usage. Two red arrows point to the 'date' and 'df' commands in the terminal output.

```

# Week 09: Check List (Deadline: Monday, 07-Dec-2020).

## □ Week 09: Linux From Scratch (part 2)(os09.pdf).

- ① Week 09 Token: **ROMULAN**
- ② Read: (OSC10 chapter 11)
- ③ Update your Virtual Guest.
- ④ Visit <https://os.vlsm.org/GitHubPages/>. Review **Last Week TOP 10 List** and pick at least 3 out of your 10 closest neighbors. See <https://cbkadal.github.io/os211/TXT/myrank.txt>.
- ⑤ Create your **TOP 10 List** of Week 09 (e.g. <https://cbkadal.github.io/os211/W09/>). **Do not use lecture material. Please be more creative!**
- ⑥ Run "chktoken ROMULAN" and write the result into myW09token.txt.
- ⑦ Update your log (e.g. <https://cbkadal.github.io/os211/TXT/mylog.txt>).
- ⑧ Update bash script (e.g. <https://cbkadal.github.io/os211/TXT/myscript.sh>).
- ⑨ Make SHA256SUM and sign it (detached, armor) as SHA256SUM.asc.
- ⑩ Place the assignment result into W09/ folder and "tar" it into myW09.tar.bz2.
- ⑪ GnuPG encrypt (armor) to myW09.tar.bz2.txt.

# The End

- ☐ This is the end of the presentation.
