REV257 23-Nov-2020

Operating Systems 202³) — PJJ from HOME

ZOOM: International [Tue 08-10] — A/Matrix [Tue 10-12]

| Week | Schedule & Deadline ¹⁾ | Topic | OSC10 ²⁾ |
|---------|-------------------------------------|---|---------------------|
| Week 00 | 15 Sep - 21 Sep 2020 | Overview 1, Virtualization & Scripting | Ch. 1, 2, 18. |
| Week 01 | 22 Sep - 28 Sep 2020 | Overview 2, Virtualization & Scripting | Ch. 1, 2, 18. |
| Week 02 | 29 Sep - 05 Oct 2020 | Security, Protection, Privacy, & C-language. | Ch. 16, 17. |
| Week 03 | 06 Oct - 12 Oct 2020 | File System & FUSE | Ch. 13, 14, 15. |
| Week 04 | 13 Oct - 19 Oct 2020 | Addressing, Shared Lib, & Pointer | Ch. 9. |
| Week 05 | 20 Oct - 26 Oct 2020 | Virtual Memory | Ch. 10. |
| Week 06 | 27 Oct - 16 Nov 2020 29 Oct 2020 | Concurrency: Processes & Threads Maulid Nabi | Ch. 3, 4. |
| Week 07 | 17 Nov - 23 Nov 2020 | Synchronization & Deadlock | Ch. 6, 7, 8. |
| Week 08 | 24 Nov - 30 Nov 2020 | Scheduling + W06/W07 | Ch. 5. |
| Week 09 | 01 Dec - 07 Dec 2020 | Storage, Firmware, Bootloader, & Systemd | Ch. 11. |
| Week 10 | 08 Dec - 16 Dec 2020 | I/O & Programming | Ch. 12. |
| | 09 Dec 2020 | Pil Kada | |

¹⁾ The **DEADLINE** of Week 00 is 21 Sep 2020, whereas the **DEADLINE** of Week 01 is 28 Sep 2020, and so on...

²⁾ Silberschatz et. al.: **Operating System Concepts**, 10th Edition, 2018.

³⁾ This information will be on **EVERY** page two (2) of this course material.

STARTING POINT — <https://os.vlsm.org/>

- **Text Book** — Any recent/decent OS book. Eg. (**OSC10**) Silberschatz et. al.: **Operating System Concepts**, 10th Edition, 2018. See also <http://codex.cs.yale.edu/avi/os-book/OS10/>.
- **Resources**
 - **SCELE** — <https://scele.cs.ui.ac.id/course/view.php?id=3020>. The enrollment key is **XXX**.
 - **Download Slides and Demos from GitHub.com**
<https://github.com/UI-FASILKOM-OS/SistemOperasi/>:
os00.pdf (W00), os01.pdf (W01), os02.pdf (W02), os03.pdf (W03),
os04.pdf (W04), os05.pdf (W05), os06.pdf (W06), os07.pdf (W07),
os08.pdf (W08), os09.pdf (W09), os10.pdf (W10).
 - **Problems** — <https://rms46.vlsm.org/2/>:
195.pdf (W00), 196.pdf (W01), 197.pdf (W02), 198.pdf (W03),
199.pdf (W04), 200.pdf (W05), 201.pdf (W06), 202.pdf (W07),
203.pdf (W08), 204.pdf (W09), 205.pdf (W10).
- **Build your own Virtual Guest**
<https://osp4diss.vlsm.org/>

Agenda

- 1 Start
- 2 Schedule
- 3 Agenda
- 4 Week 03
- 5 File System Interface
- 6 File System Organization
- 7 FHS: Filesystem Hierarchy Standard
- 8 Devices
- 9 File System Implementation
- 10 File System Internals
- 11 FUSE
- 12 Week 03: Check List
- 13 The End

Week 03 File System & FUSE: Topics¹

- Files: data, metadata, operations, organization, buffering, sequential, nonsequential
- Directories: contents and structure
- File systems: partitioning, mount/unmount, virtual file systems
- Standard implementation techniques
- Memory-mapped files
- Special-purpose file systems
- Naming, searching, access, backups
- Journaling and log-structured file systems

¹Source: ACM IEEE CS Curricula 2013

Week 03 File System & FUSE: Learning Outcomes¹

- Describe the choices to be made in designing file systems.
[Familiarity]
- Compare and contrast different approaches to file organization, recognizing the strengths and weaknesses of each. [Usage]
- Summarize how hardware developments have led to changes in the priorities for the design and the management of file systems.
[Familiarity]
- Summarize the use of journaling and how log-structured file systems enhance fault tolerance. [Familiarity]

¹Source: ACM IEEE CS Curricula 2013

File System Interface

- File Concept

- File Attributes: Name, Id, Type, Location, Size, Protection, Time Stamp: create, last modified, last accessed.
- File Operation
 - Create/Delete/Truncate
 - Open/Close
 - Read/Write
- File Types: Executable, Object, Source Code, Library, Markup, Markdown, Archive, Compressed.
- File Structure: No Structure (just a string).
- Access Methods: Sequential vs Direct Access

- Directory and Disk Structure

- Three-Structured Directories
- Directory Operation: create/delete, search/list, rename, traverse
- Path Name: Absolute vs. Relative
- FS Mounting vs. Volume Based System

- File Sharing

- Protection: Access Control (eg. -rwx-x-x)

File System Organization

- Disk Partition
 - One Disk — Many Partitions
 - Many Disks — One Partitions
 - Many Disks — Many Partitions
 - One Partition — One File System (Volume)
- Mounting vs. Volumes

```
demo@badak:~$ df
```

| Filesystem | 1K-blocks | Used | Available | Use% | Mounted on |
|------------|-----------|----------|-----------|------|----------------|
| /dev/sda2 | 9515660 | 1435776 | 7573468 | 16% | / |
| /dev/sdb1 | 32895760 | 12156672 | 19045036 | 39% | /usr |
| /dev/sdc1 | 412322216 | 79695252 | 311639116 | 21% | /home |
| udev | 10240 | 0 | 10240 | 0% | /dev |
| tmpfs | 16508828 | 0 | 16508828 | 0% | /dev/shm |
| tmpfs | 6603532 | 8880 | 6594652 | 1% | /run |
| tmpfs | 5120 | 0 | 5120 | 0% | /run/lock |
| tmpfs | 16508828 | 0 | 16508828 | 0% | /sys/fs/cgroup |
| tmpfs | 3301768 | 0 | 3301768 | 0% | /run/user/1002 |

```

FHS: Filesystem Hierarchy Standard

- Source (URL) http://refspecs.linuxfoundation.org/FHS_3.0/fhs-3.0.pdf
- A file placement guidelines/requirements for GNU/Linux-like OS.

| FILES | shareable (multiple hosts) | unshareable (single hosts) |
|---------------------------------------|----------------------------|----------------------------|
| static (read only, except for update) | /usr, /opt | /etc, /boot |
| variable (r/w) | /var/mail, /var/spool/news | /var/run, /var/lock |

● The Root File System (Required)

| Directory | Description |
|-----------|---|
| /bin | Essential command binaries |
| /boot | Static files of the boot loader |
| /dev | Device files |
| /etc | Host-specific system configuration |
| /lib | Essential shared libraries and kernel modules |
| /media | Mount point for removable media |
| /mnt | Mount point for mounting a filesystem temporarily |
| /opt | Add-on application software packages |
| /run | Data relevant to running processes |
| /sbin | Essential system binaries |
| /srv | Data for services provided by this system |
| /tmp | Temporary files |
| /usr | Secondary hierarchy |
| /var | Variable data |

- Specific Options

| Directory | Description |
|------------|---|
| /home | User home directories (optional) |
| /lib<qual> | Alternate format essential shared libraries(optional) |
| /root | Home directory for the root user (optional) |

- The /usr Hierarchy

| Directory | Description |
|----------------|---|
| /usr/bin | Most user commands (required) |
| /usr/lib | Libraries (required) |
| /usr/local | Local hierarchy (empty after main installation) (required) /usr/local/{bin etc games include lib man sbin share src} (required) |
| /usr/sbin | Non-vital system binaries (required) |
| /usr/share | Architecture-independent data (required) /usr/share/{man misc} (required) /usr/share/{color dict doc games info locale} (optional) /usr/share/{nls ppd sgml terminfo tmac xml zoneinfo} (optional) |
| /usr/games | Games and educational binaries (optional) |
| /usr/include | Header files included by C programs (optional) |
| /usr/libexec | Binaries run by other programs (optional) |
| /usr/lib<qual> | Alternate Format Libraries (optional) |
| /usr/src | Source code (optional) |

• The /var Hierarchy

| Directory | Description |
|---------------|---|
| /var/cache | Application cache data (required) |
| /var/lib | Variable state information (required) /var/lib/misc (required) |
| /var/local | Variable data for /usr/local (required) |
| /var/lock | Lock filesLog files and directories (required) |
| /var/opt | Variable data for /opt (required) |
| /var/run | Data relevant to running processes (required) |
| /var/spool | Application spool data (required) |
| /var/tmp | Temporary files preserved between system reboots (required) |
| /var/backups | (reserved names, do not use) |
| /var/cron | (reserved names, do not use) |
| /var/msgs | (reserved names, do not use) |
| /var/preserve | (reserved names, do not use) |
| /var/account | Process accounting logs (optional) |
| /var/crash | System crash dumps (optional) |
| /var/games | Variable game data (optional) |
| /var/mail | User mailbox files (optional) |
| /var/yp | Network Information Service (NIS) database files(optional) |

- (Mostly) Linux

| Directory | Description |
|-----------------|---|
| /proc | Kernel and process information virtual filesystem |
| /sys | Kernel and system information virtual filesystem |
| /usr/include | Header files included by C programs |
| /usr/src | Source code |
| /var/spool/cron | cron and at jobs |

- the `/dev/` directory
 - `/etc/fstab`: configuration of filesystems
 - `/etc/mtab` → `/proc/mounts`: mounted filesystems
 - `/proc/swaps`: swap filesystems
 - `df`: checking disk space and filesystems
 - Device Major and Minor Numbers
 - UUID - Universally Unique Identifier (128 bits)
 - GUID - Globally Unique Identifiers: `ls -al /dev/disk/by-uuid`
 - practically is NOT guaranteed unique
 - FUSE: Filesystem in Userspace
 - BBFS: Big Brother File System
- More Storage Structure
 - `tmpfs`
 - `objfs`
 - `ctfs`
 - `lofs`
 - `procfs`
 - `ufs`
 - `zfs`

A Typical Ubuntu 18.04 Work Station

```
rms46@rmsbase:~$ df

File Systems Implementation

- File System Layers / Structure
 - Application Programs
 - Logical File Systems
 - File-Organization Module
 - Basic File Systems
 - I/O Control
 - Hardware Device
- File System Implementation
- File Control Block
- FS In Memory Structure
- VFS: Virtual File Systems
 - How to support multiple File Systems
 - I.e. How to support multiple `open()/close()` `read()/write()` operations

Implementation and Allocation Method

- Directory Implementation
 - Linear List
 - Hash Table
- Allocation Method
 - Contiguous
 - Linked
 - Indexed
 - Combined Scheme
- Free Space Management
- Performance & Efficiency
- Unified Buffer Cache
- Recovery
- Log Structured File System

- File Systems
- File-System Mounting
- Partitions and Mounting
- File Sharing
- Virtual File Systems
- Remote File Systems
- Consistency Semantics
- NFS

```
demo@badak:~/mydemo/W03-demos$ ls -al
total 20

FUSE DEMO STEP by STEP

=====

ATTN: This does not work for WSL! See also

<http://www.secfs.net/winfsp/blog/files/winfsp-2017.html>

<https://wpdev.uservoice.com/forums/266908-command-prompt-console-windows-subsystem-for-l/suggestions/13522>

1. UBUNTU's deb packages (privilege):

```
sudo apt-get install autoconf automake build-essential \
    fuse libfuse-dev lynx pkg-config sshfs
```
2. Get a NEW tarball with

```
wget http://www.cs.nmsu.edu/~pfeiffer/fuse-tutorial.tgz
```

OR use the current fuse-tutorial.tgz
3. List and open the tarball with

```
tar tfz fuse-tutorial.tgz
tar xfz fuse-tutorial.tgz
```
4. Enter the directory (yours may be a different version)

```
cd fuse-tutorial-2018-02-04/
ls -al
```

FUSE (3)

5. Read the manual with
lynx index.html

Writing a FUSE Filesystem: a Tutorial

Joseph J. Pfeiffer, Jr., Ph.D. (pfeiffer@cs.nmsu.edu)
Emeritus Professor
Department of Computer Science, New Mexico State University

Version of 2018-02-04

One of the real contributions of Unix has been the view that "everything is a file". A tremendous number of radically different sorts of objects, from data storage to file format conversions to internal operating system data structures, have been mapped to the file abstraction.

One of the more recent directions this view has taken has been Filesystems in User Space, or FUSE (no, the acronym really doesn't work. Oh well). The idea here is that if you can envision your interaction with an object in terms of a directory structure and filesystem operations, you can write a FUSE file system to provide that interaction. You just write code that implements file operations like `open()`, `read()`, and `write()`; when your filesystem is mounted, programs are able to access the data using the standard file operation system calls, which call your code.

FUSE filesystems have been written to do everything from providing remote access to files on a different host without using NFS or CIFS (see SSHFS at [2]<https://github.com/libfuse/sshfs>) to implementing a filesystem to talk to devices using the Media Transfer protocol (see

[.....])

FUSE (4)

```
6. Run
   ./configure
   make
```

```
7 cd example
```

TO TRY:

```
$ ls -al rootdir
$ ls -al mountdir
$ df
$ ../src/bbfs rootdir/ mountdir/
$ df
$ ls -al rootdir
$ ls -al mountdir
```

TO PLAY:

```
$ cd mountdir
$ touch blah-blah-blah.txt
$ ls -al
$ cd ..
$ ls -al rootdir
```

TO FINISH:

```
$ fusermount -u mountdir
```

EXTRA:

```
# /etc/fstab: configuration of filesystems
# /etc/mtab --> /proc/mounts: mounted filesystems
# /proc/swaps: swap filesystems
# df: checking disk space and filesystems
# GUID (Globally Unique Identifiers) ls -al /dev/disk/by-uuid
RMS
```

FUSE (5)

Week 03: Check List (Deadline: Monday, 12-Oct-2020).

- ☐ Week 03 Token: **OS202**
- ☐ **Starting Points:** <https://os.vlsm.org/>, CBKadal, and OSP4DISS.
- ☐ Week 03: Assignment (Details in <https://osp4diss.vlsm.org/W03.html>).
 - ① Read: (OSC10 chapter 13 + chapter 14 + chapter 15)
 - ② Try Demos Week 03 (and Week 02).
 - ③ Visit your Virtual Guest, and update file ".bash_aliases" (See OSP4DISS).
 - ④ Visit <https://os.vlsm.org/GitHubPages/>. Review **Last Week TOP 10 List** and pick at least 3 out of your 10 closest neighbors. See <https://cbkadal.github.io/os202/TXT/myrank.txt>.
 - ⑤ Create your **TOP 10 List** of Week 03 (e.g. <https://cbkadal.github.io/os202/W03/>). Do not use lecture material. Please be more creative!
 - ⑥ Run "chktoken OS202" and write the result into myW03token.txt.
 - ⑦ Download TLPI Code and write the "disk usage" (du) into myW03disk.txt.
 - ⑧ Update your log (e.g. <https://cbkadal.github.io/os202/TXT/mylog.txt>).
 - ⑨ Update bash script (e.g. <https://cbkadal.github.io/os202/TXT/myscript.sh>).
 - ⑩ Make SHA256SUM and sign it (detached, armor) as SHA256SUM.asc.
- ☐ The "Assignment Day" is every Thursday morning.

The End

- ☐ This is the end of the presentation.
- ☒ This is the end of the presentation.
 - This is the end of the presentation.
